

GIS File Disclaimer:

Attached is a zipped geodatabase containing the Milwaukee River Basin TMDL reaches and subbasins. The REACH and SUB_ID fields contain the identifiers used in the TMDL analysis.

Please note that the combined sewer service area was cut out of the subbasin layer since runoff from this area does not discharge to a surface water, but is instead treated at Jones Island Water Reclamation Facility.

There are a few small storm sewered areas downstream of the CSSA (but upstream of the Lake Michigan Direct Drainage area) that get included in the most downstream Milwaukee and KK subbasins so you will see that those subbasins are discontinuous. The Lake Michigan Direct Drainage area is not included in the TMDL study area.
